Based in India · Open to relocation across the EU (Finland preferred) and to remote roles

PROFILE

Gameplay programmer with 5+ years of experience shipping live-service features and performance-focused systems across mobile and PC titles, including AAA live-ops at Electronic Arts. Strong foundation in C++ and real-time systems, with growing focus on engine programming, rendering, and gameplay architecture. Comfortable working across the full production pipeline, from prototyping to live deployment and optimisation.

SKILLS

Languages: C++, C#, GLSL, Python

Engines & Frameworks: Unity, Unreal Engine (learning), SDL2, OpenGL

Gameplay Systems: Player controllers, camera systems, multiplayer, UI systems, live-ops tools

Engine / Low-Level: Rendering fundamentals, memory management, game loop architecture, asset systems

Tools: Git, Perforce, Jenkins, Visual Studio, Xcode, Android Studio

Other: Debugging, profiling, optimisation, rapid prototyping

PROFESSIONAL EXPERIENCE

Software Engineer, Electronic Arts (EA India) — via Gameshastra

Feb 2024 – Present

- Developed and shipped gameplay features and live-ops systems across PVZ Heroes, Need for Speed Mobile, Peggle Blast, and Bejeweled Stars.
- Built internal tools for design and QA teams, improving iteration speed and content deployment.
- Optimised CI/CD pipelines, reducing Jenkins build times by ~30%.
- Contributed to features that increased player retention and engagement (DAU +34%, revenue +20%).
- Debugged and maintained large-scale live systems across Android, iOS, and Facebook platforms.

Game Developer, Redline Games

Jul 2022 – Feb 2024

- Rebuilt core gameplay architecture for Ice Cream Inc. (200M+ downloads), improving maintainability and scalability.
- Prototyped and shipped 9 hyper-casual games in rapid 2–3 week cycles, focusing on gameplay feel, UI, and performance.
- Designed and implemented gameplay systems and mechanics across multiple genres.
- Optimised runtime performance and memory usage for mobile devices.

Game Developer, Kalam Labs

Oct 2020 – Jul 2022

- Built a multiplayer educational game with 3,000+ daily active users, implementing networking, backend integrations, and real-time video streaming.
- Led development across gameplay, UI systems, optimisation, and deployment pipelines.
- Delivered a functional MVP that contributed to securing \$1M+ in seed funding.

PERSONAL PROJECTS

C++ Game Engine (In Progress)

- Building a custom engine using C++, SDL2, and OpenGL with systems for input, rendering, scene management, and ECS-style architecture; developing an accompanying custom game framework.

EDUCATION

B.Tech, Electronics & Communication Engineering

Indian Institute of Information Technology, Surat

2017 – 2021

LANGUAGES

English — Fluent (professional working proficiency)
